Windwrap®GX and Windwrap®BLC Instructions

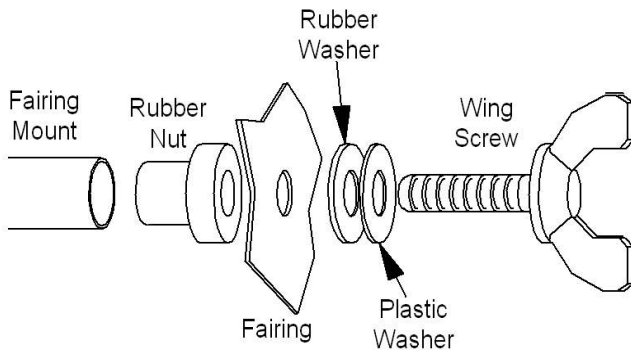

Thank you for choosing a Mueller Human-Power windscreen. Upon unpacking, allow your fairing to straighten out for a while before installing. You may want to leave the paper mask on until the fairing is completely installed to reduce scratching.

Handling:

Polycarbonate is one of the toughest plastics but it still scratches easily when compared to glass or metal. So handle carefully. Do not to slide things across the surface. Wash your hands to remove any dirt that may cause scratches. You can touch the Polycarbonate with your hands without scratching if you don't slide them across the surface.

Install the Windwrap™ RS using rubber expanding nuts as shown below. Tighten the nylon screws until the rubber nut will not pull out of the hole in the mounting hardware. The minimal tightness to achieve this is best.

Rubber Nut and Wing Screw Set Order of Assembly

Clean Up:

Any finger prints may be cleaned with the soft cotton rag and denatured alcohol. Keep alcohol away from the decals. Toothpaste can be used to smooth out scuffs.

Transport and Care of your MHP Fairing:

Save the box and foam sheet that the fairing was shipped in. When you transport your bike on the car remove the

fairing from the bike. Put the screws, washers and nuts in a baggy, roll the fairing in the foam sheet and place the fairing in its box.

To keep your fairing in top shape handle it as little as possible. Wash with window cleaner and a soft cloth. If fairing is very dusty or muddy wash with hose or in shower, flowing plenty of water over the fairing while lightly wiping with soft cloth. Toothpaste will remove some scuffs. Also scratch removal compounds can be found or ordered at these places: art supplies (picture framing,) auto supplies, motorcycle shops, and plastic shops.

If things just aren't working right give me a call toll free. I will do my best to help you out. 1-877-267-1645

Wishing you lots of bug free smiling!
